

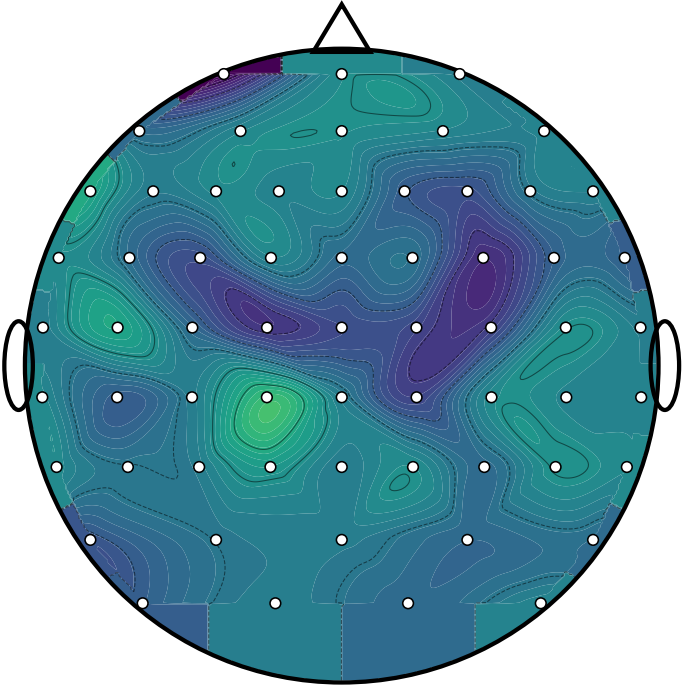

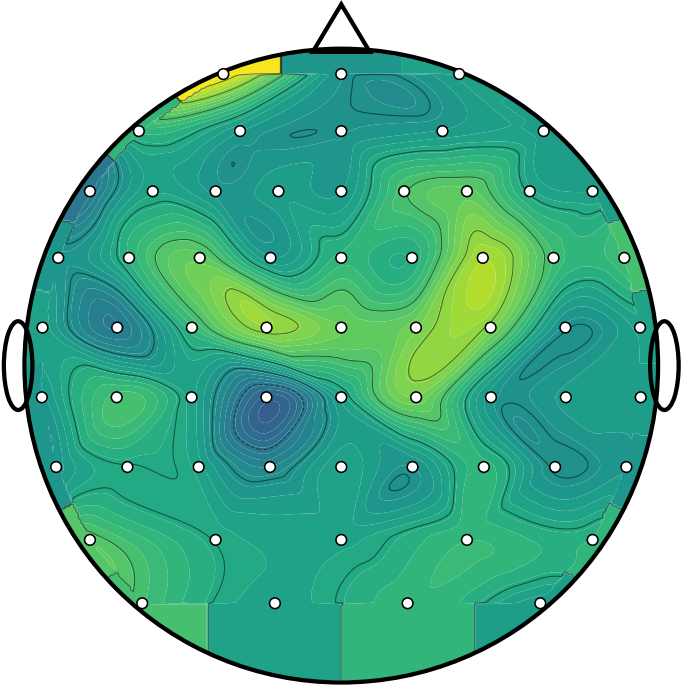

Figure 4: Spatial Cortical Topography and Discriminative Electrode Map across 62 Channels

Reconstruction path: tangent_space_diagonal_proxy | Channel-name source: documented_default_62ch_layout (column-order ASSUMED, see Disclosure #2)

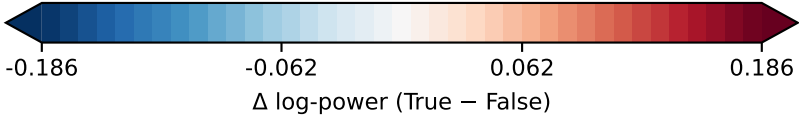

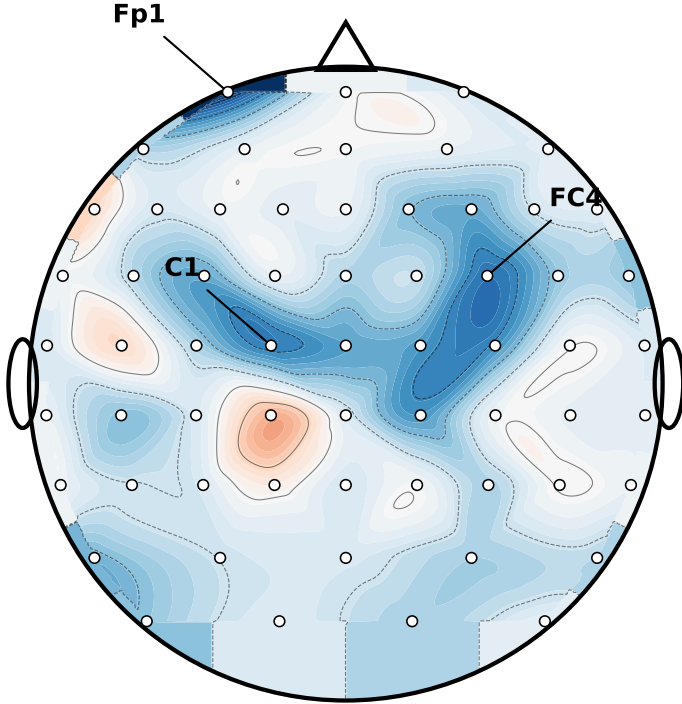

A. True Memory (Class 1)
Spatial Log-Power

B. False Memory (Class 0)
Spatial Log-Power

C. Discriminative Difference
(True – False Memory)

Values are per-channel spatial log-power relative to the post-EA tangent-space reference (not raw μV^2 band power).
Panel C annotates the top-3 most discriminative electrodes by $|\text{Class 1} - \text{Class 0}|$ difference, selected dynamically from the data.
